

Sydwell Somashini

C&I ENGINEER

To: **LESEDI**

Having 12+ years of experience as an Engineer at Eskom C&I Peaking Generation with intensive focus on industrial projects with roles of designing, procuring (operating within a budget), executing, teaching (for knowledge acquisition and hands-on skills development) and handing over the complete project of plant system upgrade to site after 3-12 months (working Mon-Sat 7am-6:30pm).

Working for my previous employer, Eskom based in Cape Town Durbanville offices with over nine hydro-plant sites. I have been involved in a dozen of system upgrade projects across South Africa (EC, KZN, WC and FS) to modernize the system for reliability, operability and maintainability which has led to less system failure and saved Millions of Rands from break-down cost.

Each of the nine projects I completed from my previous employer, Eskom, worth approximately R135 Million in total. My role would be to educate site personal which include (technical staff, contractors, supervisors & managers) on new systems for both knowledge acquisition and hands-on skills development, also to write new manuals for knowledge reference. To date I have educated and trained more than 141 site professionals on nine systems upgrade projects making them confident and competent on new system operations.

I do believe my recruitment as a Lesedi employee will benefit the both Lesedi and their clients to complete C&I Projects efficiently with attention to details and cost effectively.

Best Regards,

Sydwell Somashini
